

How could I build it with perplexity computer ?

Building this automated research-to-audio workflow is fully supported by Perplexity Computer, our newest capability introduced in February 2026. Because you have a paid subscription, you have access to Computer directly in your workspace. ^[1] ^[2]

Instead of writing a complex Python script or setting up third-party platforms like [Make.com](#), Perplexity Computer acts as a digital worker that can orchestrate this entire process natively. ^[3] ^[1]

Here is how you can set it up:

1. Initiate the Task in Computer

To get started, switch from Ask Anything mode to Computer mode.

1. Go to your Perplexity Home page.
2. Click the Computer icon. ^[2]
3. Click the Start a task field. ^[2]

2. Create a Custom Skill for Recurring Execution

Computer uses "Skills"—reusable instruction sets for specific tasks. You can create a custom skill to handle this recurring workflow: ^[4]

1. In the Computer panel, go to the Skills page and click Create skill. ^[4]
2. Choose Create with Perplexity and describe your workflow in plain English. ^[4]

You can use a prompt like this:

"Create a skill that runs every Monday at 8 AM. It should conduct deep research on [Your Topics], synthesize a comprehensive summary report, convert that text into a conversational audio file, upload the file to Google Drive (or Telegram), and send me the link."

Computer natively handles scheduling and automation for recurring tasks .

3. Automatic Orchestration

Once activated, Computer will asynchronously execute the multi-step workflow in the background: ^[1]

- **Deep Research:** It delegates the information gathering to sub-agents using models like Gemini 3.1 Pro or Claude Sonnet 4.6, running comprehensive searches across the web .
- **Audio Generation & Storage:** Because every Computer task runs in an isolated compute environment with access to a real filesystem and tool integrations, it can natively process the text-

to-audio conversion and manage file uploads to connected apps. ^[1]

- **Delivery:** Through its authenticated integrations, Computer can securely connect to your Google Drive, Slack, or email to deposit the file and notify you with the link.

Credits Usage

Keep in mind that Computer operations consume credits. As a paid Pro user, you receive a bonus of 4,000 credits to use for these advanced, multi-step tasks. The exact credit cost will depend on how frequently you schedule the recurring search and the complexity of the research. ^[5] ^[2]

Would you like help refining the exact prompt you will use to create this custom Skill in Perplexity Computer?
