Dose reduction	7	22	32	28	12	15	27	58	
Permanent discontinuation	0	NR	2	3	NR	NR	NR	9%	

NOTE: For phase I trials, toxicity data are from all doing cohorts.

Abbreviations: G3, grade 3 or greater; KA, cutaneous keratoacanthoma; mets, metastases; NR, not reported.

^aActive indicates untreated, or previously treated but progressed brain metastases.

^bData from the BRAF inhibitor-naïve cohort.

^cNumber receiving drug.

^dInvestigator-assessed intracranial response rate.

^eNonspecific term for any skin rash, and includes hyperkeratosis (dabrafenib) and acneiform dermatitis (trametinib).

^fNo cases of retinal vein occlusion were reported in any patients with melanoma on the phase I to III trials of trametinib.
